List of non-working issues:

-Buy Page is known to occasionally crash for no reason

-Possible Fix: Possibly a gradle error, changing gradle version may fix this

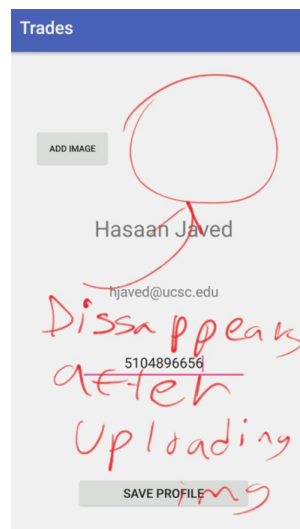

-Upon opening up the app again after closing it, the user has to log in again every time as well as the intro being repeatedly being shown

-Possible Fix: Fix would be to have a variable that saves itself signifying that the app User has already opened the app once. This could also be used to keep the user logged in as well

-Picture disappears after we added a picture onto profile in ProfileLast.java

-Possible fix: Checking to make sure picture is passed into the activity correctly

-Reference picture below:

-Upon selecting "add image" a on ProfileLast.java and selecting the picture from gallery, there is a possibility it crashes

-Possible fix: Having the app erase the last submitted image and allowing a reentry on the same declaration.

-User is able to submit a blank sell listing on the Sell Page

-Possible fix: Have a null line checker for sell page just like on the profile page

-Pressing back on the page with the “Save Profile” button causes page to crash

-Possible fix: Create a block for the user so they are not able to go back or have a way for the user to go back and change their google sign in by deleting the last record they entered in.

-Security on Firebase is open access.

-Possible fix: A possible authentication

-Sign-in page does not work for all users

-Possible fix: Check the email authentication snippet to see if it correlates with other API's for different phones.
